

The E-PURE ASPRA technology

Extracting of ultra-fine particles

The E-PURE ASPRA technology starts by extracting ultra-fine particles from the air and guiding them to the filter.

Positive ionization

Once inside all biological particles such as fine dust, viruses, bacteria and fungi are positively ionized by an electrostatic field. As a result, they are positively charged and killed / inactivated.

Capturing of charged particles

The charged particles are then guided and captured in a collection chamber preventing them from spreading any further and removing them from the air permanently.

Removal of particles

The coarse dust that is left after the ionisation process gets captured and attached to the saturated pipe and then removed when the pipe needs to be cleaned.

Cleaning

1. Open

2. Take out pipe

3. Clean pipe

4. Put pipe back in

Clean air by E-PURE ASPRA

- Filtration of all ultra-fine particles
- Virus & bacteria inactivation
- Plug & play
- Low maintenance costs
- Low energy consumption
- No ozone generation
